25 YEARS

Your Complete Forms Solution Company

EduForm™

EduForm™ is your complete online forms creation and management system, linking to any Student Information System (SIS) and any other required database(s). Customizable approval path settings allow administrators and managers to duplicate any paper process within the flow of forms throughout the system. Standardized user account roles and access permissions link to all other EVI products for single sign-on movement between solutions.

EduForm™ adds a powerful dimension to web-based forms and documents by displaying data from other district systems within a secure online forms environment. The ability to manage user groups with different rights and permissions as well as setting up unlimited approval paths gives administrators the flexibility to use forms in new and exciting ways. Advanced programming allows multiple authorized users to work in different parts of a single student's form, simultaneously! (Think K screening stations).

EduForm™ provides for unlimited data calculations, subtotals, and final scores/results from any set of elements. Displayed and gathered information may be automatically viewed/used in other Educational Vistas, Inc. products. Also, the data may be shared with additional required district data systems.
